

# Proposed Project [Susu Event]

## Benefits

- Payment system (ie Box office)
  - Adding notifications/sms
  - Recommender, app is able to recommend to other events
  - Initial student version is free whereas subsequent version on other campuses will be sold
  - Searching functionality
  - Incorporation with social network sites
  -
- 

[Sukh] - [2nd Meeting Notes] 15/03/2012 17:55 GMT

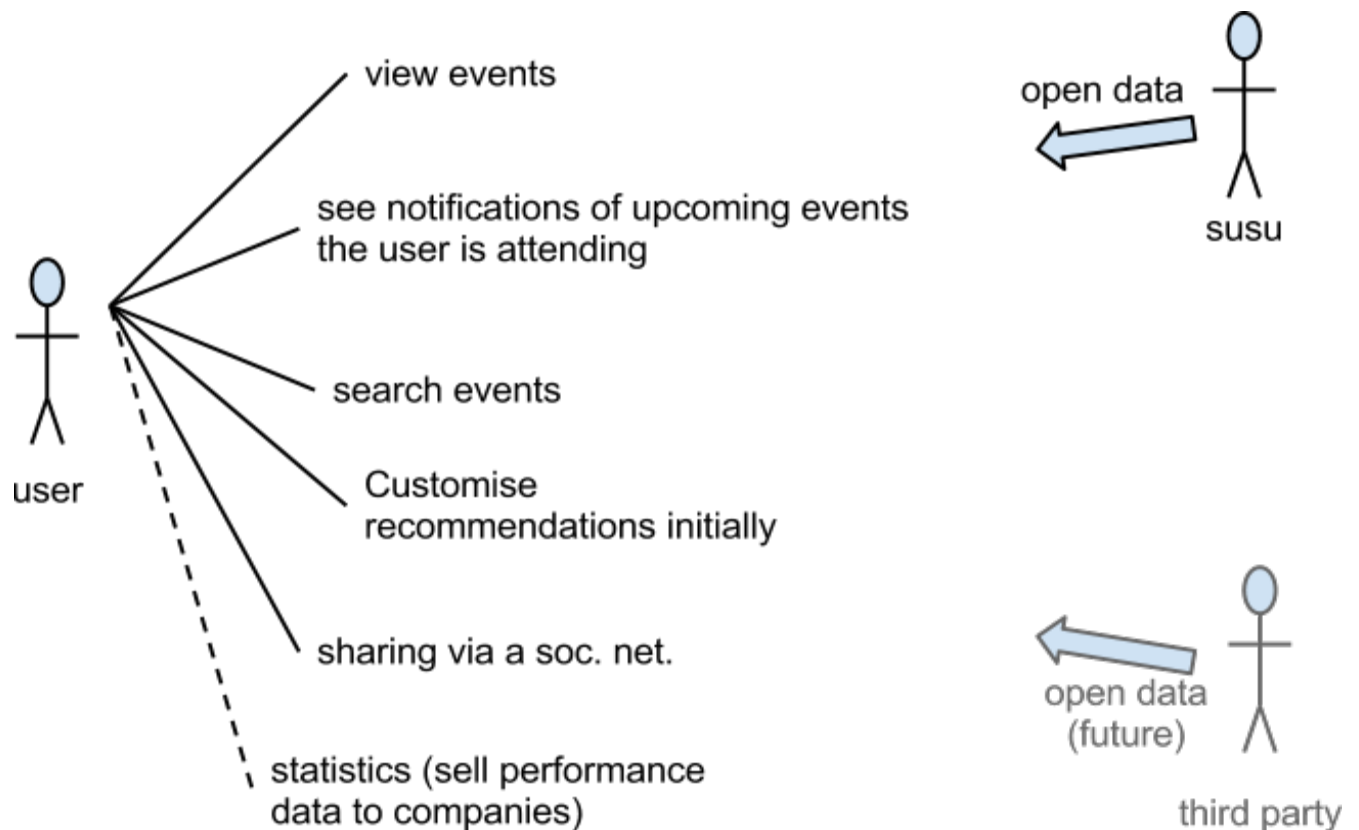

Hi guys, below are the notes we made following our meeting today at the Arlott bar:

**Problem:** people often forget or are unaware of the events which are taking place at susu.

**Rough task list:** Below are a couple of rough tasks to be carried out when we start work at the start of the third week of easter (around the 2nd April?)

Writers	Developers
Research and define the problem to crystallise the idea	Decide on a development tool
	Obtain, install and configure the coding environment
	Set up a repository
Develop the design	Develop the design

**Initial Use Case:**

## Prototypes

### Phase 1:

- make use of the behaviour data (i.e. music genres that the user likes) from their phone
- show the upcoming events
  - as bars
  - on a calendar
  - etc...
- open and view an event
- initial prompt on installing the app for initial recommendations, eliminating the problem of 'cold start'
- social network integration

### Phase 2:

- searching (i.e. keyword search to find information in the open data description field)

**Final note:** Is everyone available for a skype session at some point at the start of the third week, so that we are all clear on the plan of action moving forward?

I will be available -- Emmanuel
